

Quiet-Vent Ducting Condensation Trap

Quiet-Vent PVC Condensation Trap with Overflow Connection

For Control of condensation/moisture In ducted ventilation systems

Condensation will occur when warm, humid air extracted from bathroom, shower, kitchen or utility room hits the cooler surface of your ventilation duct

If the extracted air is significantly cooled and you have a vertical pipe the moisture will condense back to water and become trapped in your ducting, potentially causing damage to the fan and property

Constructed of PVC

diameter (Ø)	height (H)	product code
100mm	109mm	QV-CD100
125mm	170mm	QV-CD125
100mm	200mm	QV-CD150
