

Quiet-Vent Flat Horizontal Bends

Rectangular horizontal 45° and 90°-degree bends

These horizontal 45° and 90°-degree bends can be used to run your ductwork around obstacles, along walls and into ceilings and offers superior performance and durability over flexible alternatives.

Rectangular ducting is designed to be low profile to fit inside ceilings, floor slabs, or to be concealed above kitchen wall units. It is best utilised as part of a ducting system for high powered cooker hood extractors and whole house ventilation systems, such as heat recovery systems or mechanical ventilation systems in offices, houses, and apartments.
