

VS 125 6PT REAR ENTRY INSULATED BOX

Technical Specification

Part Number	P39A
Product Type	Distribution Box
Spigot Size / Duct Size	120mm / 75mm
Material	Galvanised Steel
Application	Air Distribution
Entry Type	Rear Entry
Installation	Ceiling Void, Service Voids, Concealed Spaces
Dimensions	320 x 230 x 195mm

Key Features

6 X 75mm Outlets

Acoustically Insulated

Compact Rear-Entry Design

Product Overview

The VS 125 – 6 Port Rear Entry Insulated Distribution Box provides a compact and organised solution for distributing airflow within 75mm radial ducting systems.

Designed for use with MVHR and mechanical ventilation systems, the box features 6 x 75mm radial connections alongside a 125mm rear-entry main duct connection, allowing multiple room duct runs to be connected from one central distribution point.

Constructed from durable galvanised steel and fitted with internal acoustic insulation, it helps minimise noise transmission through the ductwork while providing a robust solution for concealed installations. Its compact 320 x 230 x 195mm dimensions make it particularly suitable for ceiling voids, service spaces and other areas where installation space is limited.
