

VS 125 6PT REAR ENTRY INSULATED BOX

Technical Specification

Part Number	P42
Product Type	Distribution Box
Spigot Size / Duct Size	150mm / 75mm
Material	Galvanised Steel
Application	Air Distribution
Entry Type	Rear Entry
Installation	Ceiling Void, Service Voids, Concealed Spaces
Dimensions	350X350X205mm

Key Features

12 X 75mm Outlets

Acoustically Insulated

Compact Distribution Solution

Product Overview

The VS 150 – 12 Port Rear Entry Insulated Distribution Box provides a practical central distribution point for 75mm radial ducting systems used within MVHR and other mechanical ventilation installations.

Featuring a 150mm rear-entry main duct connection and 12 x 75mm radial outlets, the box allows multiple semi-rigid duct runs to be distributed neatly from one central location, making it particularly suitable for larger residential ventilation systems.

Manufactured from durable galvanised steel, the box also features internal acoustic insulation to help reduce noise transmission through the ductwork. Its compact 350 x 350 x 205mm design makes it suitable for installation within ceiling voids, service spaces and other concealed areas.
