Quiet-Vent 6pt 75mm Adjustable Top Entry Distribution Box - 125mm Spigot

### Technical Specification

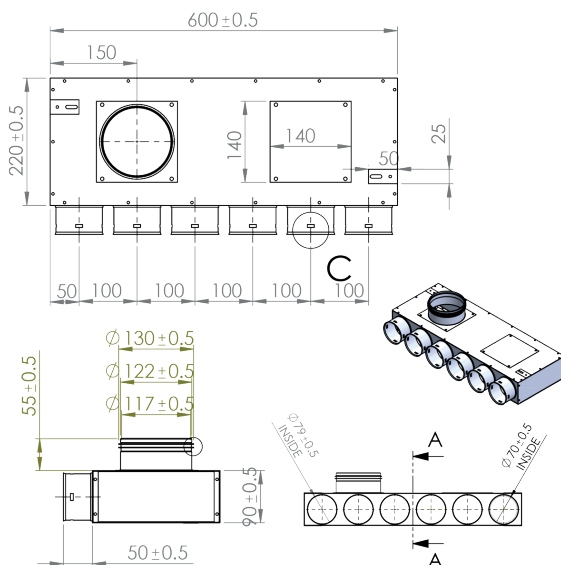

Manufacturer	Quiet-Vent
Part Number	QV75-06125MTE
Type	Manifold / Distribution Box
Spigot Size	125mm
Connection	6 x 75mm
Material	Galvanised Steel
Application	Supply / Extract

### Product Overview

The Quiet-Vent 75mm 6 Point Adjustable Top Entry Distribution Box is designed to provide efficient airflow distribution from a 125mm spigot connection to up to 6 individual 75mm radial duct runs. Suitable for use within MVHR and mechanical ventilation systems, it supports flexible and reliable airflow control across larger residential ventilation layouts.

Its adjustable top entry design offers versatile installation options, making it suitable for ceiling or floor mounting where duct routing may vary. Supplied with 2 blanking caps, unused outlets can be sealed to help maintain system efficiency and airflow balance. The unit requires compatible sealing rings to achieve secure, airtight connections, while its low-profile L600mm x W220mm x H90mm dimensions make it ideal for service voids and installations requiring multiple 75mm radial duct connections.
