Quiet-Vent 6pt Rear Entry Distribution Box - 125mm Spigot

Technical Specification

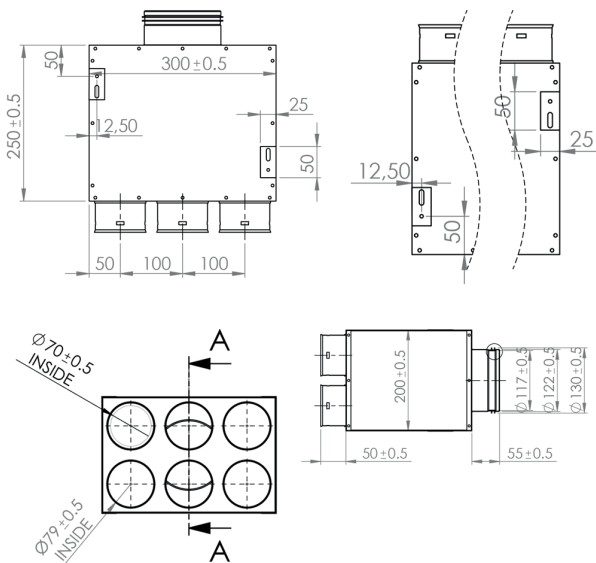

Manufacturer	Quiet-Vent
Part Number	QV75-06125RE
Type	Manifold / Distribution Box
Spigot Size	125mm
Connection	6 x 75mm
Material	Galvanised steel
Application	Supply / Extract

Product Overview

The Quiet-Vent 6 Point Rear Entry Distribution Box is designed to provide efficient airflow distribution from a 125mm main duct connection to up to 6 individual 75mm radial duct runs. Suitable for use within MVHR and mechanical ventilation systems, it supports reliable and balanced airflow across smaller residential ventilation layouts.

Its compact rear entry design makes it ideal for installation in ceilings, floors, and confined service voids where space and duct routing are limited. Supplied with 2 blanking caps, unused outlets can be sealed to help maintain system efficiency and airflow control. The unit integrates seamlessly with Quiet-Vent 75mm radial ducting systems, providing secure and airtight connections when used with compatible sealing rings.
