## QV75-PLEN

Quiet-Vent 75mm Plenum

### Technical Specification

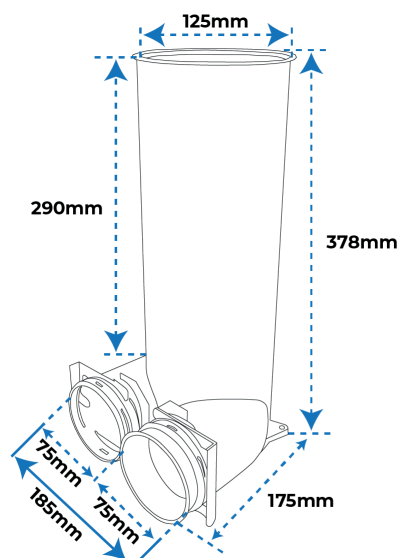

Manufacturer	Quiet-Vent
Part Number	QV75-PLEN
Type	Plenum Connector
Spigot Size	125mm
Connection	2 x 75mm
Material	ABS Plastic
Application	Supply / Extract

### Product Overview

The Quiet-Vent 75mm 90° Plenum is designed to provide a practical connection point between 75mm radial ducting and a 125mm air valve within MVHR and mechanical ventilation systems. Manufactured from durable injection-moulded ABS plastic, it offers a robust and cost-effective solution for both supply and extract air applications in residential ventilation layouts.

Its 90° design makes it suitable for installation in floors, walls, ceilings, and service voids where duct routing space may be limited. The plenum includes 2 x 75mm spigots for connection to radial ducting and 1 x 125mm spigot suitable for most standard air valves. Supplied with 2 metal clips, 1 x 75mm blanking cap, 1 x 125mm blanking cap, and 3 screw fixing points, it supports secure installation and flexible system design where one or two duct connections may be required.
