QV90-BLANKCAP

Quiet-Vent 90mm Blanking Cap

Technical Specification

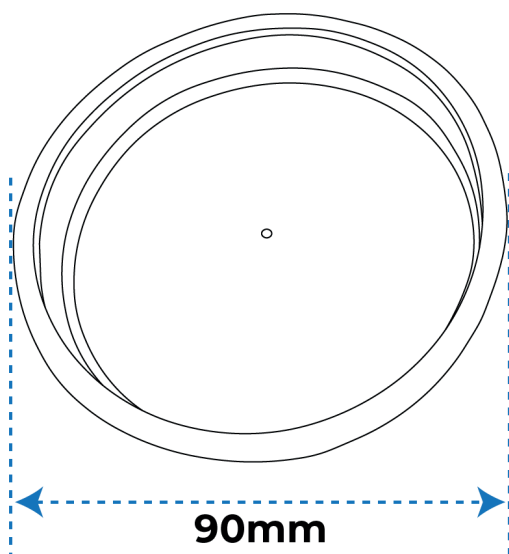

Manufacturer	Quiet-Vent
Part Number	QV90-BLANKCAP
Type	Accessories
Connection	125mm to 90mm
Application	Manifolds / Pipework

Product Overview

The Quiet-Vent 90mm Blanking Cap is designed to securely seal unused 90mm round spigots on distribution boxes, manifold boxes, and other compatible radial ducting components within MVHR and mechanical ventilation systems. It provides a simple and effective way to close off unused connection points, helping to prevent unwanted airflow and maintain overall system efficiency.

Built from durable materials for long-term use, the blanking cap is easy to install and fits directly over the unused 90mm spigot. When secured correctly, it helps support airtightness across the ventilation layout, reducing air leakage and allowing airflow to be directed only through the required duct runs. This makes it a practical accessory for adapting, balancing, or completing Quiet-Vent 90mm radial ducting installations.
